REPLACEMENT HEIFERS DON'T GROW ON TREES.

THEY GROW ON THE RIGHT NUTRITION PROGRAM.

If you're trying to expand your herd, why not grow it from within? Look to ARM & HAMMER® for the one-two combination you need to get heifers into the milking string earlier and lactating cows bred back sooner. FERMENTEN® Rumen Fermentation Enhancer gets heifers milking sooner. And studies show a heifer entering the milking string two months sooner saves \$100 in

feed and labor, adding to bottom-line profitability. MEGALAC®-R Essential Fatty Acids gets cows pregnant sooner. Together, they'll help you regain control of your replacement heifer supply—and raising your own replacements not only improves overall profitability, it means fewer biosecurity concerns. For details, contact your nutritionist or feed company today or visit www.ahdairy.com.

Welcome to the Joint Meeting of ADSA-ASAS-CSAS

Michael Hutjens
ADSA President

James Males
ASAS President

Duane McCartney
CSAS President

We're pleased you've joined us in Cincinnati to see old friends, make new ones, and exchange information with other scientists. This second joint meeting of the American Dairy Science Association, the American Society of Animal Science, and the Canadian Society of Animal Science will provide the very best in professional networking and educational opportunities.

We have an outstanding program this year that has something for everyone, including pre-meeting symposia entitled, "Udder Health Management: A Canadian Perspective," "Vitamin Nutrition of Livestock Animals," and "Using Functional Genomics for Animal Improvement." Dennis T. Avery, a Senior Fellow at the Hudson Institute and Director of the Center for Global Food Issues, will be the keynote speaker for the Opening Session.

In an attempt to make the meeting "attendee friendly," the structure of the meeting has changed for 2005. The poster presentations will be from 7:30 to 9:30 a.m. on Monday, Tuesday, and Wednesday mornings. Scientific Oral Sessions will be from 9:30 a.m. to 12:30 p.m. each morning and from 2:00 to 5:00 p.m. in the afternoon. The lunch break will be from 12:30 to 2:00 p.m. We hope you will find this schedule works well with your overall meeting goals.

The award ceremonies are certain to be on the list of highlights again this year. We have again staggered the ceremonies. The ASAS ceremony will be held on Monday, July 25; the ADSA ceremony will be held on Tuesday, July 26; and the CSAS awards banquet will be on Wednesday, July 27, which will allow you to attend one or all three. An old-fashioned ice cream social, open to all attendees, will be held Tuesday night after the ADSA award ceremony.

We invite all meeting attendees and families to attend the International/Closing Reception on Wednesday, July 27. The keynote speaker will be Hank Fitzhugh.

The agenda for this year's meeting is a testament to the program organizers who have invested an enormous amount of time and effort to bring distinguished scientists in animal agriculture and animal food products to one place. In addition to several invited speakers, this program includes 31 symposia and almost 1,500 presentations. Many thanks to the ADSA-ASAS-CSAS program committees and staff of ADSA, ASAS, and FASS for their hard work. Our program committee, Joe Ford (Chair), Rick Grant, and Jim Oltjen, along with FASS staff members, Jennifer Gavel, Keely Roy, Louise Audrieth, Ted Veatch, and Aaron Leppin (to name just a few), did a fantastic job. Special thanks go out to the Executive Directors of ASAS and ADSA-Jerry Baker, Paula Schultz, and Brenda Carlson-and to Mike Dugan, Vice President of CSAS, for keeping everything headed in the right direction.

Thank you for participating in the ADSA-ASAS-CSAS joint meeting and for making it a success.

Important Message

In the event that protestors interrupt your meetings, please ignore them. Their goal is to attract attention. Any attention you give them will only help them. Please ignore them and continue your regular business. Convention staff has a plan in place to handle these situations, and they depend on your cooperation. If you are approached by the media for an interview, please politely refuse and direct them to the convention's media room where spokespersons are available. Keep your cool and walk the other way.

Thank you for your cooperation.

Has your organic zinc lost its magic?

This may explain why you may not be getting the same response from your current zinc complex as you did in the past.

These research studies were reported in the Journal of Animal Science and Animal Feed Science & Technology.

It now exceeds 7,500,000 tons/year production and usage in all animal feeds. Numerous animal feeding studies have shown it can be a cost effective partial or full replacement of other feedstuffs. Distillers Grains Technology Council is a 60 year old nonprofit industry association that provides promotional activities, current and historical product information and an annual distillers grains Symposium. Product nutritional information and answers to questions will be available at our booth #205.

H.J. Baker & Bro., Inc. brings the experience and resources of over 50 years of manufacturing marine and animal protein supplements and 150 years in the feed, food and fertilizer business. In the late 80's H.J. Baker assembled a team of the best university minds in the field of dairy protein nutrition to develop and research PRO LAK for the dairy industry. Specifically formulated for today's high producing dairy cow, PRO LAK is a multi source marine and animal by pass protein designed to compliment the protein from rumen microbial activity. The desired nutrient balance is accomplished by 72% of the protein by passing rumen degradation and delivering the essential amino acid profile to support maximum milk production. University research has been conducted looking at milk production, digestibility and feed efficiency of PRO LAK. All of our research can be found at our website; www.bakerbro.com

NEW DATA! PRO-LAK IMPROVES FEED EFFICIENCY!

- University Research shows Pro-Lak improves **Feed Efficiency** by an average of **8.05%**.
- **Dr. Mike Hutjens**, University of Illinois states "A move from 1.5 to 1.6 (0.1 change in FE) equals \$.20 / cow / day"
- What would **8.05%** improvement in **Feed Efficiency** save you in feed costs?

Thank you for your support!

Ordinary trace minerals
are like golf balls.
You never know where
they might end up.

Trace minerals from Zinpro, on the other hand, never stray off course. Our patented complexing process ensures that each metal ion is attached to an amino acid “escort,” creating a unique molecule that’s readily absorbed by your animals. In fact, 30 years of product development and research has proven our trace mineral absorption and utilization to be so predictable, it’s like getting a hole-in-one. Every time. To find out more, contact your nutritional advisor, Zinpro sales representative or our company at 1.800.445.6145, www.zinpro.com.

Author Index

Numbers following names refer to abstract numbers: a number alone indicates an oral presentation, an M prior to a number indicates a Monday poster, a T indicates a Tuesday poster, and a W indicates a Wednesday poster.

The author index is created directly and automatically from the abstracts. If an author's name is typed differently on multiple abstracts, the entries in the author index will reflect these discrepancies. Efforts have been made to make this index consistent: however, error from author entry contributes to inaccuracies.

Notes

See what's missing from your breeding program.

Eazi-Breed CIDR Is Now Approved For Lactating Dairy Cows.

No matter what breeding program you're using, it may not achieve its full potential without the help of Eazi-Breed™ CIDR® Cattle Inserts. The fact is, reproductive problems may cause dairies an annual loss in excess of \$120 per cow. Just think of the impact of those numbers on your own operation. But with Eazi-Breed CIDR, you can ensure more pregnancies. More milk sold. And a bottom line that will be more to your liking. So put more life in your breeding program, with Eazi-Breed CIDR. You'll see just how much you've been missing.

For more information, contact your veterinarian or visit www.cidr.com.
