

## JDIP at the JAM

Attendees at the 2010 JAM will have a great opportunity to learn more of the latest research focused on addressing Johne's disease, a devastating disease affecting all ruminant species. The Johne's Disease Integrated Program (JDIP) [www.jdip.org](http://www.jdip.org), a comprehensive consortium of scientists whose mission is to promote animal biosecurity through the development and support of projects that are designed specifically to enhance knowledge, promote education, develop real-world solutions and mitigate losses associated with [Johne's Disease](#) (JD), will meet as a part of the JAM. JDIP holds an annual conference to report on research funded through the JDIP competitive grants program and develop plans for future work. JDIP and Johne's related sessions will be held on Sunday and Monday July 11<sup>th</sup> and 12<sup>th</sup>. Sunday's session, beginning at 1 pm in the **Grand Hyatt Denver**, 1750 Welton Street will focus on reports and plans related to the JDIP Core and Project areas. Anyone with an interest in learning more about current and future Johne's research is encouraged to attend the session. Monday will include poster and oral presentations of research results. The JDIP/Johne's sessions will be included in the regular JAM meeting schedule as part of the Animal Health program. The JDIP/Johne's poster session begins at 7:30 am on Monday with JDIP/Johne's oral presentation sections Monday morning and afternoon.

"JDIP at the JAM" provides an excellent opportunity for networking between Johne's researchers, dairy and animal scientists and industry professionals from around the world. We encourage you to take advantage of the opportunity.
